Summary: This contract is for a major replacement of the fire suppression systems at the locations listed below. The existing Halon Suppression Systems at these facilities are outdated and obsolete. The systems require upgrading as the obsolete components require replacement parts that are no longer being manufactured. New codes and standards have been created since these systems were installed. The Halon Suppression Systems were employed over 17 years ago to provide a means of fire suppression, primarily in rooms with high-value electronic equipment. Since their installation, Halon Suppression Systems have been identified as an ozone depletion chemical and are no longer available for recharging the existing systems. Reconfiguration of spaces in the facilities also means adjustments and/or correction of systems so that all fire alarm and supervisory alarm signals are accurately indicated on the control panels.

The system shall be completely functional. It shall include mechanical and electrical installation, all detection and control equipment, agent and storage containers, discharge nozzles, pipe and fittings, manual release and abort stations, audible and visual alarm devices, auxiliary devices and controls, shutdowns, alarm interface, and advisory signs, and testing of a functional UL listed SAPPHERE Clean Agent Suppression System. Request for Proposals (RFP) procedures were followed in accordance with Cook County Procurement Code. Rolf Jensen & Associates, Inc. is recommended for the Countywide Fire and Life Safety Systems Upgrades Package Number 10 contract.
